AMBATI JAGADISWAR REDDY

Hyderabad, Telangana | +91 8096613742 | ambatijagadiswarreddy@gmail.com | Gisthub | Leetcode | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Computer Science undergraduate at MLR Institute of Technology with hands-on experience building Python-based and full-stack applications. Proficient in Python, Java, Flask, FastAPI, SQL, and REST APIs, with practical experience in software development, databases, and Git. Strong foundation in Data Structures & Algorithms, OOP, SDLC, and problem solving.

EDUCATION

MLR Institute of Technology (MLRIT), Hyderabad

Bachelor of Technology in Computer Science & Engineering | Expected Graduation: May 2029 *Current CGPA: 9.50*

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Software Engineering

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, TypeScript, SQL, C, Kotlin (Basics),SDLC
AI & Machine Learning: Machine Learning, Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Embeddings, Semantic Search, Prompt Engineering
RAG & AI Tools: ChromaDB, Ollama, Vector Databases, Vector Search, Local LLMs, Google AI Studio
Frameworks & APIs: Flask, FastAPI, REST APIs, React.js, Next.js
Databases: MySQL, Firebase Firestore, Supabase
Developer Tools: Git, GitHub, Docker, VS Code
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Problem Solving

PROJECTS

RAG-Based AI Document Assistant | *Python, Flask, Ollama, ChromaDB, Embeddings, RAG*

• Built a Retrieval-Augmented Generation (RAG) pipeline in Python using **LangChain** to answer questions grounded in user-provided documents.
• Implemented document loading, text splitting, embedding generation, and semantic similarity retrieval using **LangChain and ChromaDB**.
• Integrated **Ollama** for local LLM inference and used LangChain chains to generate context-aware, document-grounded responses.
• Developed the end-to-end application and API layer using **Flask**, connecting LangChain-based retrieval, LLM generation, and response handling.

WHAT I LEARNED: CLICK HERE

ESIC MedStock – Smart Pharmacy & Queue Management System | *Next.js, Firebase Firestore, JavaScript, Tailwind CSS*

• Built a healthcare web application for real-time medicine availability tracking and pharmacy queue management.
• Developed patient and pharmacist workflows covering authentication, prescription processing, and inventory management.
• Designed Firestore database collections and implemented QR-based prescription verification with multilingual support.

REPOSITORY : 1.Click here for WEB application 2.Click here for ANDROID application
WHAT I LEARNED: CLICK HERE

FormFinance – AI Finance Operations & Settlement Reconciliation Platform | *FastAPI, Python, OCR, AI, Next.js*

• Building an AI-powered finance controller for businesses to automate settlement reconciliation and financial verification.
• Implementing OCR and document-processing pipelines to extract payments, refunds, fees, taxes, adjustments, and settlement data.
• Developing deterministic verification, evidence matching, and AI-agent investigation workflows to identify discrepancies and generate Approve, Flag, or Escalate decisions with auditable results.

ACHIEVEMENTS

- Runner-up, App Development Workshop Competition, MLRIT
- Solved 140+ problems on LeetCode covering core Data Structures & Algorithms.
- Participated in AI and software development hackathons, building practical application prototypes.
